PHPKB has a feature to filter knowledge base users by specifying parameters in the search form. Expand "**Users**" section in left navigation bar and click on "**Search**" link to open **Search Users** page as shown in the screenshot below:

Specify one or more parameters for searching users in the search form and click the search button. Search parameters are explained below:

1. Enter the keywords you want to search in the "**Keywords**" field.
2. "**Search-In**" field allows you to search the users by name, email address or username individually or in all together.

3. In "**Search Type**" you can mark any of following options:
 - **Any Word** will return results that contain any of the keywords you have entered.
 - **All Words** will return results that contain all the keywords you have entered.
 - **Exact Match** will return results that exactly match the keywords you have entered.
4. Select **Active** in "**Status**" to search for active users and **Inactive** to search for users with inactive status. By default, **Any** is selected which will search for both active and inactive users.
5. Select a "**Level**" (See: [PHPKB Users](#)) to search for specific type of user. By default, **All** is selected which searches users irrespective of their level.
